

Bottle Effects

SUPER HI GLOSS

A co-extrusion blow moulding process which offers an extremely highly-polished finish to HDPE bottles, giving a high-quality 'premium' feel.

VISISTRIPE

A 'stripe' is put into the bottle allowing you to see the capacity of product, or alternatively put in a contrasting colour for decoration.

TRANS COLOURED PET

Translucent bottle with a hint of colour.

TRANS FROSTED PET

The bottle is frosted to give it a 'smoked', hazy effect, reminiscent of acid-etched glass.

HI GLOSS

Gives a shiny, polished finish to bottles and tubes.

PEARLESCENT PIGMENTS

These contain particles that are essentially transparent crystals of a high refractive index. The result is a silvery lustre, an iridescent effect resembling natural pearl.

FROSTED PVC

The bottle is frosted to give it a smoked, completely translucent effect, similar to a piece of iced glass.

CO-EX SOFT TOUCH

A co-extrusion blow moulding process that gives the plastic bottle a soft/rubbery feel.

THERMOCHROMIC

The materials reversibly change colour with alteration in temperature.

Bottle Effects

CO-EX GLASS POLYMER

A co-extrusion blow moulding process using a PCTG outer with PP inner giving a clear-glass like appearance

FOIL BLOCKED CAPS

M&H is able to produce foil blocked caps in a range of standard colours - gold, silver, bronze and purple. Custom colours and designs also available. These eye-catching caps will add a touch of luxury to any toiletries and personal care product.

ACID ETCHED EFFECT

Using silk screen printing lacquer is applied to clear containers to simulate the appearance of 'acid etched' glass.

METALLIC FINISH

Achieved by a masterbatch additive of transparent crystals giving a soft metallic sheen.

PCR BOTTLE

PCR PET and HDPE available at levels from 25-100% PCR

SILK EFFECT DECORATION

The 'silk effect' is achieved by a combination of lacquers. The effect can be created by a combination of dry offset printing and silk screen printing, or just by silk screen printing

GLOSS LACQUER

A clear gloss lacquer which is silk screen printed onto the product to give a distinctive high-quality appearance

HIGH-BUILD VARNISH

A high-build varnish printed onto the product giving a premium embossed effect.

TAMPO PRINTING

We can tampo print areas which are otherwise difficult to print or are heavily contoured.
