

CONVENIENT DIP TUBE ASSEMBLY

OUR TIMELY DIP TUBE ASSEMBLY PROCESS REDUCES LOTION PUMP LEAD TIMES TO JUST 3-4 WEEKS,

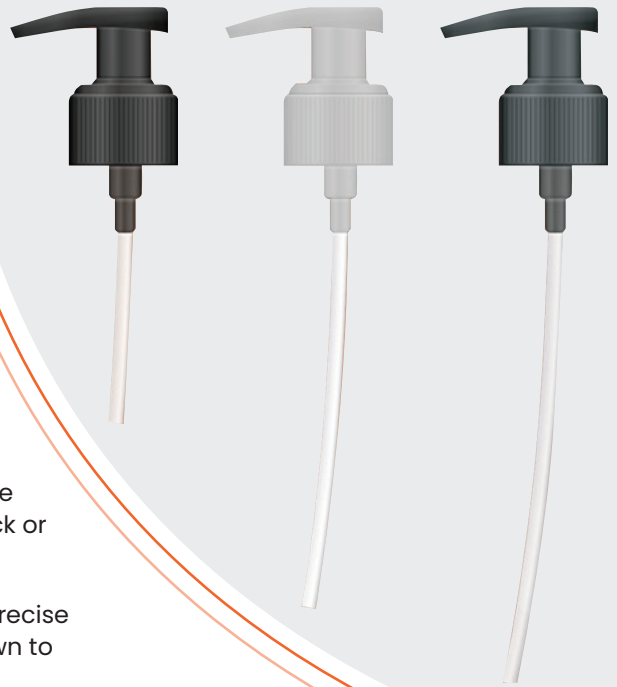

conveniently aligning with customer needs and production schedules. We stock all components of our Dip Tube Assembly including the 28-410 black or white Saddle Head Lotion Pump and Dip Tubing.

Upon demand, our dip tube machine, cuts and assembles dip tubes to precise customer specifications, slashing typical lead times from 8-10 weeks down to just 3-4 weeks.

Through our automated assembly process, we not only expedite production but also offer lower minimum order quantities at competitive prices, empowering our clients to maintain leaner inventory levels. This flexibility proves invaluable, particularly in scenarios where a single-style pump is utilized across various products and container sizes, each requiring distinct dip tube lengths.

For Black, White, Natural, and customizable color lotion pumps, our warehouse stocking program option further streamlines operations, reducing lead times to an impressive 7-10 days with Just-In-Time delivery.

Empire Emco's 'Convenient Dip Tube Assembly' represents the pinnacle of efficiency and convenience, enhancing both your production line and market presence.
